1. Hero

- **Eyebrow:** Industries · Insurance
- **H1:** SugarAI CRM for Insurance
- **Intro paragraph:** SugarAI for Insurance Industry brings quotation, underwriting, policy servicing and claims onto one customer record, so quotes go out faster and every policyholder conversation carries full history. HLB HAMT implements SugarAI for insurers, brokers and agencies across the UAE and GCC, cloud or on-premise.
- **Buttons:** Request a demo (primary) · Talk to our insurance team (secondary)

Hero side panel

- **Heading:** Built for how insurers and brokers sell here
- **Sub-line:** Configured for multi-line policies, broker networks and renewal-driven revenue across the UAE and GCC.

Item	Copy
One record across policy and claim	Every quote, policy, claim and renewal tied to one customer record instead of scattered across email or spreadsheets.
Brokers, agents and direct	Broker and agency pipelines managed alongside direct and bancassurance channels, without losing sight of the policyholder.
Renewals that don't slip	Renewal dates and cross-sell opportunities tracked against the policy, not a renewal officer's memory.

2. Why SugarAI

- **Eyebrow:** Why Sugar

- **H2:** Why SugarAI is a top choice for insurance
- **Intro:** Insurers today face changing customer needs, stricter regulations and growing competition. SugarAI, trusted CRM software for insurance worldwide, applies intelligent automation across life insurance, health insurance, property insurance and casualty, commercial insurance and specialized insurance lines. It helps tailor policyholder experiences, speed up claims and simplify compliance.

Figure	Label	Description
+23%	Increased revenue	Actual business results reported by SugarAI customers running sales and quotations on the platform.
+30%	Improved win rate	More quotes convert when guided selling and pre-approved quote workflows replace manual pricing.
3x	Pipeline volume growth	AI lead scoring and pipeline visibility help teams focus on the right opportunities and close deals faster.

3. The platform (NEW section)

- **Eyebrow:** The platform
- **H2:** One platform for marketing, sales and service
- **Intro:** SugarAI is a CRM for insurance agents, underwriters and service teams alike, built as one Unified Customer Data Platform where marketing, sales and service run on a single record.

Four cards (tag / heading / copy):

Tag	Heading	Copy
Sugar Sell	Lead & opportunity management	Smart lead scoring, pre-approved quote workflows and guided selling, with forecasting on real underwriting capacity.
Sugar Serve	Intelligent case management	Every claim, query, complaint and dispute runs as one case with SLA notifications and dynamic forms.
Sugar Market	Multi-channel campaigns & lead nurturing	Optimise landing pages, run drip campaigns across social and Google Ads and use AI lead scoring to prioritise sales-ready leads.
SugarAI Predict	Real-time sales assistance & next-best offers	Get real-time alerts on cross-sell opportunities and policyholder churn risks with AI-powered personalised offers and renewal follow-ups.

4. Benefits

- **Eyebrow:** Benefits
- **H2:** SugarAI implementation benefits for insurance
- **Intro:** Six ways SugarAI insurance CRM software helps your team to improve sales, service, and customer retention.

Six cards (heading / copy):

1. **360° policyholder view** - One view of every detail of policyholder like policy, premiums, claims and every touchpoint, so with SugarAI the relationship stays with the business, not one inbox.

2. **Dynamic forms & policy configuration** - Build accurate multi-line quotes with real product options and rating rules, while dynamic forms and automated approvals handle exceptions.
3. **Agent & broker management** - Direct, broker and bancassurance channels in one SugarAI system, with lead scoring and policy recommendations behind every channel.
4. **SLA management & case tracking** - Keep claims and renewals linked to each policy, with SLA alerts and cross-sell opportunities highlighted before expiry.
5. **Rules & process engine** - Lead routing, referrals and maker-checker approvals run on rules with full audit trails that administrators can update themselves.
6. **Customer lifecycle management** - Policy status, premium trends and churn risk in board-ready reports, with SugarAI's AI highlighting the next-best offer per account.

6. What we can do for you

- **Eyebrow:** Our capabilities
- **H2:** What HLB HAMT does for you
- **Intro:** Get SugarAI implemented, integrated, and tailored to your business with one HLB HAMT team supporting you from setup to daily operations.

Numbered list (01–08):

#	Heading	Copy
01	SugarAI implementation	Configuration built around your quote-to-bind process. We start from an insurance blueprint, not a blank platform.
02	Dynamic forms & policy configuration	Apply the right rating factors and referral rules to each quote, with dynamic forms helping teams get pricing right the first time.
03	Agent & broker management	Partners submit business, track status, and log claims online, reducing phone enquiries through automated commission workflows.
04	Policy issuance & underwriting integration	Policy, billing and claims data read live into SugarAI; bound policies write back without re-keying.
05	Intelligent case management & SLA compliance	First notice of loss and every complaint logged as one SugarAI case with SLA escalation.
06	Renewals & collection follow-ups	Renewal pipelines open before expiry, with collection follow-up and next-best-offer cross-sell campaigns.
07	Data-driven insights with reports & dashboards	Performance by product line, branch and agent, with loss ratio and Power BI reporting at scale.
08	Mobile-ready experience with gamification	Mobile capture and gamified dashboards for field teams, plus Guided Low-Touch onboarding for a fast start.

9. Who we serve

- **Eyebrow:** Who we serve
- **H2:** Powering transformation across insurance
- **Intro:** The same SugarAI platform, configured differently for each part of the sector.

Six tiles (heading / copy):

1. Life and health insurers - Individual and group life, medical schemes and mandatory health cover, with SugarAI driving renewal and retention.

2. General and property & casualty(P&C) insurers - Motor, property, marine and liability lines, with claims volume and loss-ratio visibility.

3. Insurance brokers and agencies - Multi-carrier placements across commercial insurance and personal lines, with commission tracking and one client view.

4. Takaful and bancassurance - Shariah-compliant lines and bank-channel distribution, with participant records held to the same standard.

5. MGAs and underwriting agencies - Delegated authority business for specialized insurance risk, binder tracking and carrier reporting alongside the direct relationship.

6. Reinsurance providers & risk management - Treaty and facultative placement tracking for reinsurance providers. Cedant relationships and claims bordereaux management.

10. Configured for the UAE and GCC market

- **Eyebrow:** Regional fit

- **H2:** Configured for the UAE and GCC market
- **Intro:** Insurers and brokers here sell through diverse channels under mandatory health cover rules, where a week's delay on a renewal is lost revenue. Our insurance CRM software for the UAE reflects that from day one.
- **Button:** Talk to our insurance team

Checklist (heading / copy):

- 1. DHA & DOH compliance tracking** - Dubai and Abu Dhabi mandatory health scheme deadlines tracked against every policy.
- 2. GCC broker network visibility** - Multi-carrier broker relationships alongside direct sales, with commission and placement visibility.
- 3. Multi-entity, group-wide view** - One unified view of the customer group across GCC entities and branches. Teams have a clear view of accounts, interactions, and activities.
- 4. Bilingual by design** - Arabic and English interfaces, documents and correspondence with more languages on request.
- 5. WhatsApp-native servicing** - Renewal reminders and policy queries logged against the record on the channel policyholders use.
- 6. Flexible cloud or on-premise deployment** - On-demand cloud (SaaS), private cloud for tighter control, or on-premise where regulation requires it - mixed across entities as needed.

11. Our implementation process

- **Eyebrow:** How HLB HAMT works
- **H2:** Our SugarAI implementation process for insurance industry
- **Intro:** A defined methodology with sign-off at every stage, rolled out in phases so your sales team can start working before the claims module is added.

Six-step timeline:

- 1. Discovery** - We map how a quote becomes a policy, claim and renewal.
- 2. Solution design** - Data model, rating rules and referral thresholds agreed and signed off.
- 3. Configure and build** - Quotation, underwriting workflow, integrations, broker portal and dashboards built in SugarAI.
- 4. Data migration** - Policyholder and claims data are cleansed, mapped, and tested before loading.
- 5. Test and train** - Acceptance testing with your teams, followed by role-based training and enablement.
- 6. Deployment and support** - Phased deployment with hypercare, followed by continued support.

Callout box below the timeline

- **Heading:** Guided Low-Touch onboarding : a fast, standard start
- **Copy:** For standard sales and quotation needs, Guided Low-Touch onboarding puts a working system in your hands on day one. Data goes live in about five days, with integration and claims tracking added later.

12. Why choose HLB HAMT

- **Eyebrow:** Why HLB HAMT
- **H2:** Why choose HLB HAMT

Four cards:

- 1. Regional depth** - 26 years across the UAE and GCC, with consultants who know how insurance is sold and serviced here.
- 2. A blueprint, not a blank system** - We start with an insurance configuration tailored to your business, covering rating, referrals, claims, and renewals.
- 3. One accountable team** - Consulting, implementation, integration and support under one engagement. No subcontracting, no gaps.
- 4. Support that continues** - A dedicated team on agreed service levels, with a named manager and a clear escalation path.

13. FAQ

- **Eyebrow:** Common questions
- **H2:** Insurance questions we are asked most.

Q: How does it support audit trails and regulatory compliance?

In SugarAI, every quotation, change and approval is timestamped, with maker-checker controls and full audit trails. KYC and AML checks sit on the customer record.

Q: Does it replace our policy administration system, or work alongside it?

Almost always alongside. Policy administration stays in the system of record. SugarAI is where sales, service and claims teams work, with data read in live and written back automatically.

Q: Can we track broker and agent commissions separately from the policyholder relationship?

Yes. Commission and payout status sit on the broker record, separate from the policyholder, so finance reconciles payouts without exposing commercial terms.

Q: What happens when a renewal is missed or a policy lapses?

SugarAI opens renewal pipelines automatically ahead of expiry. A lapsed policy is flagged as a reinstatement opportunity, not archived as a write-off.

Q: Can underwriters and claims handlers work from mobile devices in the field?

Yes. A claims handler can pull up policy history before a site visit and capture the assessment on site, complete for customer, reinsurer or audit.

Q: Can we keep our policyholder data in the UAE, or on our own servers?

Yes. SugarAI deploys as on-demand cloud, private cloud for tighter control, or on-premise where regulation requires it to be secured and scalable in every mode. This matters in insurance, where regulators expect data to stay within a jurisdiction.

Q: Why do insurance implementations typically take longer than a standard CRM rollout?

Rating complexity and compliance sign-off add time a generic CRM project doesn't face. A single-line SugarAI rollout lands in eight to twelve weeks; a wider programme runs five to seven months.
